Data Review Report: The Messy Study

Study overview: 8 subjects, 3 sites, vitals data (SBP, DBP, pulse). Fictional dataset for practice.

Method: 6 SQL checks run in DB Browser for SQLite.

#	Check type	Subject	Finding	Proposed query to site
1	Range	S008	Age recorded as 210	“Please confirm the correct age for S008.”
2	Range	S004	SBP 300 mmHg at Baseline	“Please verify the SBP value of 300 for S004.”
3	Missing data	S005	SBP blank at Baseline	“Please provide the SBP value for S005”
4	Date logic	S006	Visit on 20-Jan before consent on 22-Jan	“Visit date is before the consent date, please verify with the source data for S006”
5	Duplicate	S003	Two Baseline records with different values	“Two Baseline records with different values, please check with the source data for S003”
6	Completeness	S007	No vitals data entered	“Please provide the vitals data for S007”
